

# YUM CONFIGURATION IN RHEL 8 FOR CLI AND GUI

**Tools**

- Redhat** Powered Off
- openstackredhat** Powered Off
- Kubernetesredhat** Powered Off
- Kube Slave1** Powered Off
- Kube Slave2** Powered Off
- Kubemaster** Powered Off
- Kubemaster Clone** Powered Off
- Ansible Managed Node** Powered Off
- Ansible Slave Node** Powered Off
- Ansible Master Node** Powered Off
- minikube** Powered Off
- Ansible Slave Node 2** Powered Off
- RedHatCli** Running

New Settings Discard Show

**General**

Name: RedHatCli  
Operating System: Red Hat (64-bit)

**System**

Base Memory: 2048 MB

**RedHatCli - Settings**

**Storage**

Storage Devices

- Controller: IDE
  - rhel-8.0-x86\_64-dvd.iso**
- Controller: SATA
  - RedHatCli.vdi

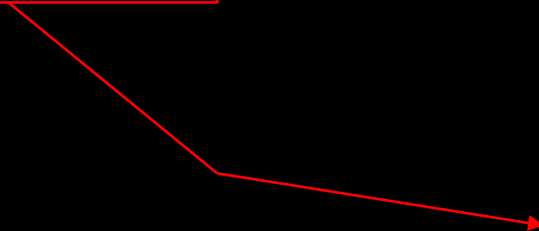

Attributes

Name: IDE  
Type: PIIX4  
☒ Use Host I/O Cache

OK Cancel

DVD should connected here  
If not then connect DVD first

```
[root@localhost ~]# mkdir /dvd
```

Make a directory in /  
here I have given name as  
dvd

```
[root@localhost ~]# mount /dev/cdrom /dvd/
mount: /dvd: /dev/sr0 already mounted on /run/media/root/RHEL-8-0-0-BaseOS-x86_64.
[root@localhost ~]#
[root@localhost ~]#
[root@localhost ~]# cd /dvd/
[root@localhost dvd]#
[root@localhost dvd]#
```

Go inside /dvd

```
[root@localhost dvd]# ls
AppStream  EFI      extra_files.json  images      media.repo      RPM-GPG-KEY-redhat-release
BaseOS     EULA    GPL               isolinux    RPM-GPG-KEY-redhat-beta  TRANS.TBL
[root@localhost dvd]#
[root@localhost dvd]#
```

If you see these software then your  
dvd is successfully mounted

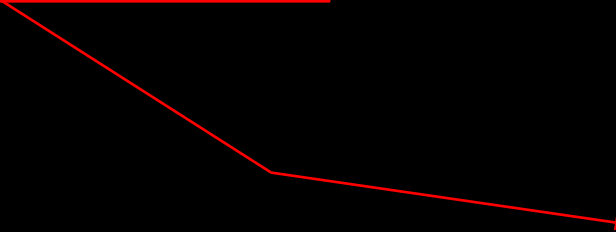

```
[root@localhost ~]# vim /etc/rc.d/rc.local
```

Go inside /etc/rc.d/rc.local

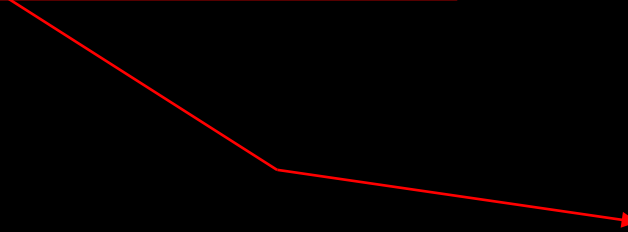

```
#!/bin/bash
# THIS FILE IS ADDED FOR COMPATIBILITY PURPOSES
#
# It is highly advisable to create own systemd services or udev rules
# to run scripts during boot instead of using this file.
#
# In contrast to previous versions due to parallel execution during boot
# this script will NOT be run after all other services.
#
# Please note that you must run 'chmod +x /etc/rc.d/rc.local' to ensure
# that this script will be executed during boot.
```

```
touch /var/lock/subsys/local
mount /dev/cdrom /dvd/
```

Write this.  
This will mount the dvd at  
every bootup. Because this file  
run at every bootup.

```
[root@localhost ~]# vim /etc/rc.d/rc.local
[root@localhost ~]#
[root@localhost ~]# chmod +x /etc/rc.d/rc.local
[root@localhost ~]#
[root@localhost ~]#
```

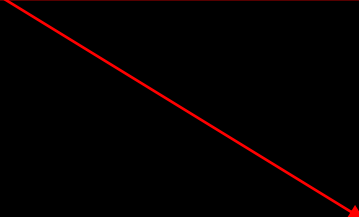

To make executable. What you have written run above command

```
[root@localhost ~]# vim /etc/yum.repos.d/dvd.repo
```

Go inside  
/etc/yum.repos.d/dvd.repo

Here I have created a file with  
name dvd you can create with  
any name

**Write this command inside that dvd.repo file**

```
[root@localhost ~]# yum repolist
```

```
Updating Subscription Management repositories.
```

```
Unable to read consumer identity
```

```
This system is not registered to Red Hat Subscription Management. You can use subscription-manager to register.
```

```
Repository 'docker' is missing name in configuration, using id.
```

```
Repository 'dvd1' is missing name in configuration, using id.
```

```
Repository 'dvd2' is missing name in configuration, using id.
```

```
Last metadata expiration check: 0:05:43 ago on Thu 17 Sep 2020 11:36:58 AM IST.
```

repo id	repo name	status
docker		71
dvd1		4,672
dvd2		1,658
kubernetes	Kubernetes	570

```
[root@localhost ~]#
```

If you see this message of dvd1 and dvd2  
then your yum is successfully configured
